

产品名称: SIS3
产品别名: (E)-SIS3

生物活性:																																		
Description	(E)-SIS3 is a specific, cell-permeable, and selective Smad3 inhibitor, which inhibits Smad3 phosphorylation with an IC50 of 3 μ M. (E)-SIS3 also inhibits the myofibroblast differentiation of fibroblasts by TGF- β 1[1][2].																																	
In Vitro	(E)-SIS3 completely diminishes the constitutive phosphorylation of Smad3 as well as the up-regulates type I collagen expression in scleroderma fibroblasts. (E)-SIS3 is a useful tool to evaluate the TGF- β -regulated cellular mechanisms via selective inhibition of Smad3[2].
