

**产品名称: SB-334867 (free base)**

**产品别名: SB334867A free base; SB-334867 free base**

**生物活性:**

<b>Description</b>	SB-334867 free base is a selective non-peptide orexin OX1 receptor antagonist with a pK <sub>b</sub> value of 7.2. IC <sub>50</sub> value: 7.2 (pK <sub>b</sub> ) [1] Target: orexin OX1 receptor in vitro: SB-334867-A inhibited the orexin-A (10 nM) and orexin-B (100 nM)-induced calcium responses (pK(B)=7.27+/-0.04 and 7.23+/-0.03 respectively, n=8), but had no effect on the UTP (3 microM)-induced calcium response in CHO-OX(1) cells. SB-334867-A (10 microM) also inhibited OX(2) mediated calcium responses (32.7+/-1.9% versus orexin-A) [1]. in vivo: Single-unit recordings in anesthetized rats demonstrated the central effects of the selective orexin-1 receptor antagonist SB-334867 (2 mg/kg, intravenous), as it reversed the excitatory effects of orexin-A administration (6 microg, intracerebroventricular) on the activity of locus coeruleus (LC) cells [2]. The ICV injection of SB-334867 alone had no effect on the formalin-induced nociceptive behaviors. Pre-treatment with SB-334867 at a dose of 0.5 nmol significantly attenuated the analgesia induced by morphine (at dose 1.5mg/kg of morphine; interphase and phase 2B and at dose 3mg/kg of morphine just phase 2B of formalin test) [3]. Administered alone, SB-334867 (30 mg/kg, but not lower doses) significantly reduced food intake and most active behaviours (eating, grooming, sniffing, locomotion and rearing), while increasing resting. Pretreatment with SB-334867 dose-dependently blocked these effects of orexin-A, with significant antagonism evident at dose levels (3-10 mg/kg) below those required to produce intrinsic behavioural effects under present test conditions in rats [4]. Toxicity: Acute systemic treatment with the selective orexin-1 (OX1R) antagonist SB-334867 reduces food intake in rats, an effect associated with an acceleration in behavioural satiation and unrelated to gross behavioural disruption, alterations in palatability, or toxicity.																					
<b>In Vitro:</b>  DMSO : ≥ 49 mg/mL (153.45 mM)  H <sub>2</sub> O : < 0.1 mg/mL (insoluble)  * "≥" means soluble, but saturation unknown.	<table border="1"><thead><tr><th rowspan="2"></th><th>Solvent \ Mass</th><th rowspan="2">1 mg</th><th rowspan="2">5 mg</th><th rowspan="2">10 mg</th></tr><tr><th>Concentration</th></tr></thead><tbody><tr><th>Preparing</th><td>1 mM</td><td>3.1317 mL</td><td>15.6583 mL</td><td>31.3165 mL</td></tr><tr><th>Stock Solutions</th><td>5 mM</td><td>0.6263 mL</td><td>3.1317 mL</td><td>6.2633 mL</td></tr><tr><th></th><td>10 mM</td><td>0.3132 mL</td><td>1.5658 mL</td><td>3.1317 mL</td></tr></tbody></table>		Solvent \ Mass	1 mg	5 mg	10 mg	Concentration	Preparing	1 mM	3.1317 mL	15.6583 mL	31.3165 mL	Stock Solutions	5 mM	0.6263 mL	3.1317 mL	6.2633 mL		10 mM	0.3132 mL	1.5658 mL	3.1317 mL
