

产品名称: **SR12813**

产品别名: **GW 485801**

生物活性:																											
Description	SR12813 is an inhibitor of 3-hydroxy-3-methylglutaryl-coenzyme A (HMG-CoA) reductase, with an IC50 value of 0.85 μ M.																										
IC₅₀ & Target	IC50: 0.85 μ M (HMG-CoA Reductase)																										
In Vitro	SR-12813 inhibits incorporation of tritiated water into cholesterol with an IC50 of 1.2 μ M but has no effect on fatty acid synthesis. Furthermore, SR-12813 reduces cellular 3-hydroxy-3-methylglutaryl-coenzyme A (HMG-CoA) reductase activity with an IC50 of 0.85 μ M[1]. Both 25-HC and SR-12813 can kill mammalian cells through blocking the synthesis of cholesterol, thereby they are ideal reagents for lethal selection. SR-12813 kills HeLa cells at concentration range from 8 μ M to 16 μ M. SR-12813 kills wild type cells and mutant cells infected by Ad-Cre (SL-5+Cre), but the mutant SL-5 survives this condition. SR-12813 or 25-HC promotes the degradation of the 95-KDa full-length HMG-CoA reductase in wild type HeLa and SL-5 mutant cells[1].																										
Solvent&Solubility	<p>In Vitro:</p> <p>DMSO : \geq 50 mg/mL (99.10 mM)</p> <p>* "\geq" means soluble, but saturation unknown.</p>

实验参考:	
Kinase Assay	<p>Briefly, compounds are added to the cells in Me₂SO (final concentration, 0.1%). After the experiment cells are lysed by the addition of 0.1 mL of 0.25% Brij 96, 0.1 M sucrose, 0.1 M KF, 50 mM KCl, 40 mM potassium dihydrophosphate, 30 mM EDTA, 5 mM dithiothreitol, pH 7.4 at room temperature. In some experiments KF is omitted to measure "total" HMG-CoA reductase activity. HMG-CoA reductase activity in the cell lysate is further determined. [1]</p>
