产品名称: Ibiglustat

产品别名: Venglustat; SAR402671; GZ402671

生物活性:

Description	Ibiglustat (Venglustat), a potential therapy for PD Parkinson's disease, SRT in Fabry's and Gaucher's, is a selective, allosteric inhibitor of glucosylceramide synthase (GCS) with ability to cross the blood-brain barrier[1][2][3].																										
IC ₅₀ & Target	Glucosylceramide synthase[1].																										
In Vitro	Ibiglustat (SAR402671) (1 μM, 15 days) treated FD cells are close to the physiological level in untreated WT cells in GL-3 levels, suggesting that Ibiglustat can prevent additional GL-3 accumulation and could serve to ameliorate the abundant levels of this sphingolipid in FD cardiomyocytes[4]
