产品名称: Ribocil-C

产品别名: Ribocil-C

生物活性:

Description	Ribocil-C is a highly selective inhibitor of bacterial riboflavin riboswitches.																												
IC ₅₀ & Target	Bacterial riboflavin riboswitches ^[1]																												
In Vitro	Ribocil-C is a highly selective inhibitor of the flavin mononucleotide (FMN) riboswitch that controls expression of <i>de novo</i> riboflavin (RF, vitamin B2) biosynthesis in <i>Escherichia coli</i> . Ribocil-C specifically inhibits dual FMN riboswitches, separately controlling RF biosynthesis and uptake processes essential for <i>Staphylococcus aureus</i> growth and pathogenesis ^[1] . Ribocil-C is a small-molecule synthetic mimic of FMN that binds the FMN riboswitch of multiple GN bacteria, including <i>Escherichia coli</i> , <i>Pseudomonas aeruginosa</i> , and <i>Acinetobacter baumannii</i> , to inhibit <i>ribB</i> expression, RF synthesis, and consequently arrest bacterial growth ^{[1][2]} .																												
In Vivo	Higher dose Ribocil-C treatment groups (60 and 120 mg kg ⁻¹ ribocil-C) demonstrate a dose-dependent reduction in bacterial burden of 1.87 and 3.29 log ₁₀ [CFU per g spleen] reduction respectively versus sham-treated mice, without mortality or gross effects of toxicity observed ^[2] .																												
Solvent&Solubility	<p>In Vitro:</p> <p>DMSO : ≥ 24.6 mg/mL (58.64 mM)</p> <p>* "≥" means soluble, but saturation unknown.</p> <table border="1"><thead><tr><th rowspan="2">Preparing Stock Solutions</th><th>Solvent</th><th>Mass</th><th>Concentration</th><th></th></tr><tr><th></th><th>1 mg</th><th></th><th>5 mg</th><th>10 mg</th></tr></thead><tbody><tr><td>1 mM</td><td>2.3838 mL</td><td></td><td>11.9190 mL</td><td>23.8379 mL</td></tr><tr><td>5 mM</td><td>0.4768 mL</td><td></td><td>2.3838 mL</td><td>4.7676 mL</td></tr><tr><td>10 mM</td><td>0.2384 mL</td><td></td><td>1.1919 mL</td><td>2.3838 mL</td></tr></tbody></table> <p>*请根据产品在不同溶剂中的溶解度选择合适的溶剂配制储备液。一旦配成溶液,请分装保存,避免反复冻融造成的产品失效。</p> <p>储备液的保存方式和期限 -80°C, 6 months; -20°C, 1 month。-80°C 储存时,请在 6 个月内使用, -20°C 储存时,请在 1 个月内使用。</p>				Preparing Stock Solutions	Solvent	Mass	Concentration			1 mg		5 mg	10 mg	1 mM	2.3838 mL		11.9190 mL	23.8379 mL	5 mM	0.4768 mL		2.3838 mL	4.7676 mL	10 mM	0.2384 mL		1.1919 mL	2.3838 mL

实验参考:																													
Animal Administration	DBA/2J mice are infected by intraperitoneal injection with <i>Escherichia coli</i> strain MB5746 (5×10 ⁴ CFU per mouse) and treated by subcutaneous injection with Ribocil-C (30, 60, 120 mg/kg) or ciprofloxacin (0.5mg/kg) three times over a 24 h infection period. Spleens are aseptically collected from five mice per group and the reduction of log[CFU per g spleen tissue] is calculated on the basis of bacterial burden in spleens of the vehicle-treated (10% DMSO) control group ^[2] .
