## 产品名称: KN-93 (phosphate)

## 产品别名: KN-93 phosphate

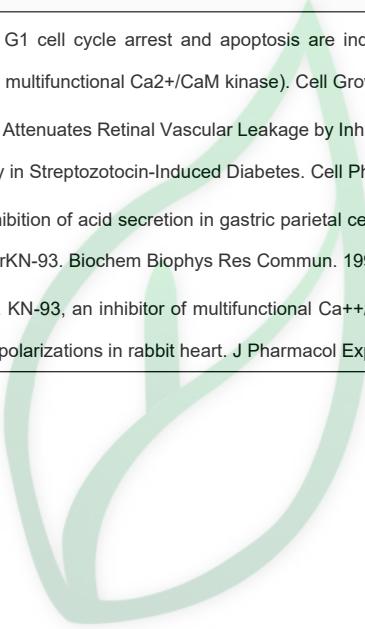

### 生物活性:

Description	KN-93 phosphate is a novel membrane-permeant synthetic inhibitor of purified neuronal CaMK-II, with $K_i$ of 370 nM.																							
IC <sub>50</sub> & Target	Ki: 370 nM (CaMK-II)																							
In Vitro	After 2 days of KN-93 treatment, 95% of cells are arrested in G1. G1 arrest is reversible; 1 day after KN-93 release, a peak of cells had progressed into S and G2-M. KN-93 also blocks cell growth stimulated by basic fibroblast growth factor, platelet-derived growth factor-BB, and epidermal growth factor in NIH 3T3 fibroblasts <sup>[1]</sup> . KN-93 inhibits the H <sup>+</sup> , K <sup>+</sup> -ATPase activity but strongly dissipates the proton gradient formed in the gastric membrane vesicles and reduces the volume of luminal space <sup>[2]</sup> . KN-93 (0.5 $\mu$ M) prevents increased LV developed pressure during action potential prolongation and early afterdepolarizations. Ca <sup>2+</sup> -independent CaM kinase activity is increased during early afterdepolarizations and this increase is prevented by KN-93 <sup>[3]</sup> .																							
Solvent&Solubility	<b>In Vitro:</b>  DMSO : 100 mg/mL (166.94 mM; Need ultrasonic)  H <sub>2</sub> O : 50 mg/mL (83.47 mM; Need ultrasonic)
