产品名称: ONO-AE3-208

产品别名: AE 3-208

生物活性:

Description	ONO-AE3-208 is an EP4 antagonist, and suppresses cell invasion, migration, and metastasis of prostate cancer.																													
IC ₅₀ & Target	EP4																													
In Vitro	ONO-AE3-208 suppresses the in vitro cell invasion and migration in a dose-dependent manner without affecting cell proliferation[1]. ONO-AE3-208 abolishes CTGF in the presence of the EET synthesis inhibitor MS-PPOH. Arachidonic acid (AA) causes dose-dependent dilation of the attached Af-Art, and this effect is blocked by ONO-AE3-208[2].																													
In Vivo	ONO-AE3-208 suppresses the in vivo bone metastasis of PC3 cells in mice[1]. The photon tumor burdens are significantly increased in a time-dependent manner in the control group in comparison with those in the ONO-AE3-208-treated group. The rate of metastasis formation is significantly higher in the former than in the latter. The median time of metastasis formation is 29 d in the ONO-AE3-208-treated animals as compared with 21 d in the controls[3].
